ENV 350H Energy Policy and Environment  
Fall 2022 Course Syllabus  
University of Toronto, School of the Environment

Time: Monday, 6-8 p.m.

Location: RW 117

Office Hours: Friday, 10 – 11 a.m. or by appointment

Instructor: Keith Stewart <climatekeith@gmail.com>

T.A.: Joaquin Bardallo Bandera <joaquin.bardallobandera@mail.utoronto.ca>  
Mircea Ghergina <mircea.gherghina@mail.utoronto.ca>

Pre-requisite: Completion of 8.0 FCE including ENV221H1/ENV222H1; or permission of the Undergraduate Associate Director

Description

This course explores the connections between energy and environment policy and politics, including the connections with climate change.

The patterns of energy use of individual countries and of the global system as a whole reflect the accumulation of policy choices and have significant impacts on the environment, locally and globally. Not the least of these impacts is the potential to disrupt the global climate system. Decisions about energy technologies are strongly influenced by social organization, economics and politics.

The first part of the course provides a historical context for the physical, environmental, technological, economic and political aspects of energy systems and energy transitions before exploring the principal policy tools available to decision-makers. The second part examines a range of political and policy approaches to understanding and facilitating an energy transition to address the threat posed by climate change.

Learning objectives

By the end of this course, students should be able to:

1. Explain the social, political, economic and technological context for energy transitions.
2. Identify and describe a range of theoretical approaches to energy and environmental policy-making.
3. Apply the theoretical concepts learned in the course to current policy-making processes.

Assignments

Students need to be able to prepare and submit short essays in PDF, word or equivalent format onto Quercus. Additional detail on each of the assignments will provided in class.

Assignment 1: Hope and Public Policy (20%). Given the historical context and current technology, are you hopeful regarding the possibility of achieving an energy transition? What gives you hope (or makes you less hopeful)? This paper should be grounded in the materials from weeks 2-4, but can also include your personal opinions and experience. It should be between 900 and 1200 words. Due by midnight on October 14.
Assignment 2: Policy approaches (30%). Choose one of the policy approaches from weeks 6 – 10 and address the following questions with respect to their role in political and policy debates on the energy transition. What interests are represented in this approach? What interests are opposed? What ideas do they focus on? What institutions best serve this combination of interests and ideas? This assignment should be no more than 2000 words and is due by midnight on November 16.

Assignment 3: Major paper (40%): For the major paper, you will prepare a submission on behalf of a policy actor of your choice in response to the federal government’s public consultation on the proposed cap on greenhouse gas emissions from the oil and gas sector (see the Options discussion paper from the week 7 readings). That submission will identify how your chosen policy actor’s interests are affected by this specific policy proposal within the broader context of the energy transition, and the key ideas that they should seek to advance. You will then answer the relevant questions from the federal government’s discussion document in light of the ideas and interests you have identified.

It can be written either in essay format or as a briefing note and should be no more than 2500 words. You will be expected to demonstrate an understanding of the concepts studied in the course and an ability to apply them to this topic, as well as an ability to identify and include other relevant research.

A draft of your paper should be posted for peer review by November 27. The more complete your draft, the better feedback you can receive from colleagues.

The final essay is due on December 7 (i.e. two days after the last class).

Assignment 4: Peer Review (10%). Students will undertake a peer review of two papers by their colleagues (i.e. the drafts submitted November 27), to be completed by December 2.

Evaluation criteria:

The primary criteria used in evaluating written work are the following:
1. **Analysis:** Your analysis should display understanding of the topic and, based on that understanding, originality of thought.
2. **Structure:** Your written work should have a clear focus, provided by the research question, and a structure which logically flows from that focus.
3. **Writing style:** Your papers should be written in a clear and unambiguous style which assists, rather than impedes, communication with the reader.
4. **Precision and accuracy:** Precision means saying exactly and specifically what you mean, avoiding ambiguity and vague generalities. Accuracy refers to absence of major factual errors.
5. **Mechanics:** Your work must be completely free of grammatical errors, spelling errors or major factual errors. References can be in any style but the same format must be used consistently and they must be accurate.

Late assignments

Late assignments will be penalized at a rate of 2.5%/day (i.e. an assignment 10 days late will lose 25% off of the assigned grade, so a grade of 7.5/10 would become 5/10). If you wish to be granted an extension, please contact the course instructor in advance of the deadline.

Required readings

The two textbooks are available at the bookstore. All of the other required readings are available electronically via Quercus or via the links in the course syllabus. The required text books are:

Students are also expected to follow the public and media debates on energy and environmental politics and policy in addition to the readings identified below. The course instructor will share relevant news stories and analyses via Quercus.

**Academic Integrity**

Academic integrity is essential to the pursuit of learning and scholarship in a university, and to ensuring that a degree from the University of Toronto is a strong signal of each student’s individual academic achievement. As a result, the University treats cases of cheating and plagiarism very seriously. The University of Toronto's [Code of Behaviour on Academic Matters](https://www.utoronto.ca/academic-integrity/code-behaviour-academic-matters) outlines the behaviours that constitute academic dishonesty and the processes for addressing academic offences. Potential offences include, but are not limited to:

In papers and assignments:
1. Using someone else’s ideas or words without appropriate acknowledgement.
2. Submitting your own work in more than one course without the permission of the instructor.
3. Making up sources or facts.
4. Obtaining or providing unauthorized assistance on any assignment.

On tests and exams:
1. Using or possessing unauthorized aids.
2. Looking at someone else’s answers during an exam or test.
3. Misrepresenting your identity.

In academic work:
1. Falsifying institutional documents or grades.
2. Falsifying or altering any documentation required by the University.

All suspected cases of academic dishonesty will be investigated following procedures outlined in the Code of Behaviour on Academic Matters. If you have questions or concerns about what constitutes appropriate academic behaviour or appropriate research and citation methods, you are expected to seek out additional information on academic integrity from your instructor or from other institutional resources (see https://www.academicintegrity.utoronto.ca).

**USE OF PLAGIARISM DETECTION TOOL**
Normally, students will be required to submit their course essays to the University’s plagiarism detection tool for a review of textual similarity and detection of possible plagiarism. In doing so, students will allow their essays to be included as source documents in the tool’s reference database, where they will be used solely for the purpose of detecting plagiarism. The terms that apply to the University’s use of this tool are described on the Centre for Teaching Support & Innovation web site (https://uoft.me/pdt-faq).

**ACCESSIBILITY NEEDS**
Students with diverse learning styles and needs are welcome in this course. The University of Toronto is committed to accessibility: if you require accommodations for a disability, or have any other accessibility concerns about the course, please contact Accessibility Services as soon as possible.

**ADDITIONAL SERVICES and SUPPORT**
The following are some important links to help you with academic and/or technical service and support

- General student services and resources at Student Life
- Full library service through University of Toronto Libraries
- Resources on conducting online research through University Libraries Research
